- Applied product: migration-center

Further information on www.migration-center.com

Benefits

First stage for global roll-out delivered on time and budget

Successful content migration to the new environment will lead to future project cost savings

Compliance with regulatory requirements for Quality & R&D

Challenge

Global control of content with seamless information sharing is an important key factor for innovative and international operating Life Sciences Companies. Therefore, the global Life Science Company CSL Behring decided to introduce the OpenText Life Sciences Solution Suite with its business area-specific modules, which ensures consistent access, compliance and security while improving business productivity and efficiency. Currently, CSL Behring is using the enterprise content management solution OpenText Documentum including Webtop and D2 as interface. The D2 layer is the technical basis of the OpenText Documentum Life Science Solution Suite, which is specifically developed for supporting business processes such as quality assurance, research and development etc.

Solution

With the help of fme's migration experts and their software migration-center, CSL was migrating content from the enterprise content management system OpenText Documentum to the D2 application. migration-center has been certified for OpenText Documentum for ten years and is able to carry out highly automated, large volume document migrations without interrupting any of the normal business operations. »We are looking back on almost 10 years of good cooperation between CSL and fme and we are very happy to have served CSL internationally again with this large migration project,« says Florian Piaszyk, Director fme Products.
