

Maximize Value Through Effective Upgrades to the CARA Life Sciences Platform in the Cloud

Use fme Life Sciences' full set of services to support efficient and cost-effective upgrades

By leveraging Generis CARA you have already adopted a platform to help you manage your data and documents more effectively and efficiently. By upgrading to the Generis CARA Life Sciences Platform you expand these capabilities and can leverage the full SaaS advantages. fme is a Preferred Implementation and Migration Partner for the Generis CARA platform, with trained and certified CARA consultants in all fme's Centers of Excellence locations.

Challenge

Generis released their CARA Life Sciences Platform in 2019 which provides a cloud native offering and a variety of functionality and performance improvements. The challenge for clients is to upgrade the existing CARA solution to that new platform in the most efficient and cost-effective way while taking advantage of the enhanced platform.

Solution

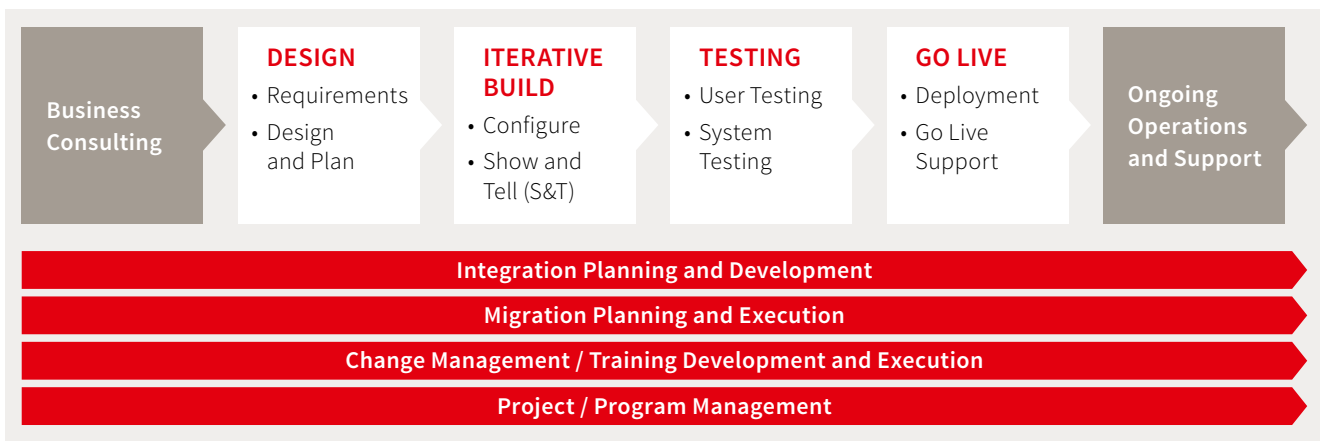

fme's team of technicians is trained on the CARA Life Sciences Platform and will support you through the complete upgrade initiative.

Our consultants will walk with you through the differences between the CARA versions and design the approach to take your existing specific CARA functionalities to the new version – whether you want to go to the cloud or stay on-premise after the upgrade.

About CARA

Generis provides the CARA Life Sciences Platform for seamless flow of content and information across the enterprise. CARA is a cloud-first platform providing functionality-rich solutions for regulated business processes, including a comprehensive end-to-end platform for Life Sciences. The platform is now independent from other expensive Database and Content Management platforms such as Oracle and OpenText Documentum. Initially released in 2003, CARA has evolved into a leading Content Management solution for Life Sciences companies. With two decades of development and deployment supported by experience and customer-driven development, CARA is highly effective in supporting regulated business processes.

You will be able to use the new platform capabilities to their full potential without losing any of your prior functionalities as our developers will stand up the new platform and make sure that all identified configurations and customizations are maintained. Rely on the experts in our team who will accompany you through any required testing and validation cycles and help you throughout the rollout process as needed.

Integrations

Your CARA application does not operate in a silo and you already have integrations to other systems in your application landscape or foresee future integration needs that should be addressed as part of the upgrade. We can support any data and document integration and exchange needs with our cloud-ready and pre-configured integration-center solution framework to provide a unified platform. By identifying interface and integration requirements with your team we can recommend, design and execute the most fitting implementation approach and deploy and unit test the solution.

Migration

Moving to the new version of the CARA platform will also include bringing over any currently existing CARA documents and data. Additionally, you might have other legacy systems queued up that should be replaced by the future platform. Remove the complexity from migration projects by relying on our practice methodology, market leading software tool and our experienced migration professionals. While going through Migration Planning, Development Dry-Runs, QA and Production migration runs we ensure high-quality outcomes and keep a careful eye on cost management for you.

Managed Services

Once the new CARA application is in regular »operate« mode, it will be necessary to commence with the daily maintenance and support topics. You will also need to consider new platform releases that will happen multiple times per year. As part of our Post Implementation Services, we make sure that you stay aligned and that user issues are resolved through SLAs.

Take full benefit of the new CARA Life Sciences Platform

- Independent technology platform allowing license cost savings
- Availability as SaaS solution
- Improved usability, functionalities and performance
- Shorter time for roll-out with end-to-end project implementation by trained CARA technicians

Our Offering

Please contact us for an initial discovery meeting to understand your current use and future vision for the CARA Life Sciences Platform. We will be happy to propose the next steps and a path forward for you, tailored to your specific situation, whether starting with an analysis phase or POC focused on specific critical items or directly planning the full upgrade project.
